

## Sustainable Supply Chain Management Policy Statement

China Airlines' vision of "Become the preferred airline in Taiwan" has firmly established the airline in Taiwan and around the world. As part of China Airlines' management objectives, China Airlines is committed to the pursuit of sustainable development. We understand that true sustainable development can only be achieved through collaboration with our business partners. Thus, we have defined a sustainable supply chain policy that integrates international guidelines such as UNGC, ILO and ISO 26000. This policy applies to China Airlines, subsidiaries, joint ventures, suppliers, and contract manufactures. Concurrently, we urge that the principles of sustainable development be implemented as part of our overall supply chain management to jointly fulfill our corporate social responsibility.

To achieve supply chain sustainability, China Airlines has committed itself to development and continuous improvement in the three dimensions of governance, society, and the environment.

We are committed to:

1. Conducting risk and impact assessments to ensure supply chain sustainability and establish fair and transparent mechanisms for supplier management.
2. Selecting economic and reasonable products and services by taking their environmental and social effects into consideration.
3. Adhering to ethical business standards by eliminating leaks, illegal interests, and all corruption.

We require all suppliers and contractors to:

1. Strictly abide by local and international laws and regulations.
2. Implement quality control systems that ensure the quality and safety of the products or services provided.
3. Establish information security mechanisms that prevent the misuse of confidential and sensitive information.
4. Company with local and international human rights and labor standards, and no child labor and discriminatory practices.
5. Provide a safe working environment and secure workplace health and safety issues.
6. No forced labor and respect freedom of association as well as proper working conditions and pay.
7. Reduce the negative impact from the products and services on the environment and society in accordance with sustainability-related regulations.

Signed :
